## SUMMARY

Web Developer with approximately 2 years of hands-on experience at **Beyoung.in**, a product-based e-commerce clothing brand. Specialized in building backend systems using **Node.js and Express.js**, developing ERP modules in **Core PHP**, and delivering modern UIs with **Next.js and React**. Trained in **AWS Cloud and Linux administration**. Strong focus on clean code, API performance, and real-world problem-solving.

## EXPERIENCE

### Beyoung.in

*Executive Developer*

Oct. 2024 – Present  
Udaipur, Rajasthan, India

- Developed and maintained scalable **RESTful APIs** using **Express.js (Node.js)** for Beyoung's core e-commerce backend; reduced API response time by **30%** and improved overall throughput.
- Built **Next.js and React-based internal dashboards**, replacing legacy PHP interfaces and improving operational efficiency across cross-functional teams.
- Architected and delivered a **Wallet & Loyalty Rewards System** enabling cashback credits, reward-point accumulation, redemption workflows, and full transaction tracking.
- Engineered a **Smart Inventory Assignment System** that dynamically allocates and reassigns stock based on real-time availability and incoming inventory forecasts.
- Designed **Order and Inventory lifecycle management** modules, including history tracking and reporting dashboards used daily by the operations team.
- Applied **Redis caching** strategies to cut repeated database calls and improve response times across high-traffic endpoints.
- Streamlined complex **MySQL queries and database schemas**, significantly reducing execution time on product and order management endpoints.
- Deployed and managed applications on **AWS infrastructure with Linux servers**, handling environment configuration for both staging and production.
- Collaborated with product, design, and operations teams in an **Agile environment**, consistently delivering maintainable, production-ready features on schedule.

### Beyoung.in

*Intern Developer*

Jul. 2024 – Oct. 2024  
Udaipur, Rajasthan, India

- Built and maintained **ERP modules in CakePHP** covering inventory management, order processing, and internal reporting used daily by operations staff.
- Developed **backend API endpoints** and integrated them with frontend JavaScript interfaces, gaining end-to-end full-stack development experience.
- Identified and resolved **performance bottlenecks and critical bugs** in the PHP codebase, enhancing the stability of core business workflows.
- Executed feature enhancements using **PHP, MySQL, HTML, CSS, and JavaScript** under senior developer guidance.

## KEY ACHIEVEMENTS

### Backend Modernization

- Migrated a legacy Node.js 12 (CommonJS) backend to Node.js 22 with ES Modules and full TypeScript adoption. Introduced Redis caching to reduce API latency, established a service-layer architecture for better separation of concerns, and integrated Drizzle ORM for type-safe, efficient database queries.

### ERP System Development

- Designed and delivered complete ERP modules — inventory, orders, and reporting — from scratch in Core PHP; adopted as daily operational tools by the operations team.

## API & Database Performance

- Enhanced high-traffic API endpoints and MySQL queries, cutting backend response times for critical e-commerce operations.

## Self-Taught Full-Stack Engineer

- Independently mastered the full stack — from frontend (Next.js) and backend (Node.js, Express) to cloud infrastructure (AWS, Linux) — without a formal Computer Science degree.

## PROJECTS

---

### Plango | *People on Demand App — Expo + Supabase*

- Cross-platform mobile service marketplace built with **Expo (React Native)** and **Supabase** (Auth, PostgreSQL, Storage), featuring booking workflows, availability management, and role-based access for Users and Providers.

### Salt | *Team & Task Management System — Core PHP | [Live Demo](#)*

- Internal collaboration tool built with **Core PHP & MySQL**, featuring task boards, assignment logic, status workflows, a real-time chat module, and a notification system.

### EasyBook | *Booking & Reservation Platform — Next.js*

- Full-stack web platform enabling users to book services and local businesses to manage reservations, with multi-role dashboards (User / Business) and a scalable backend structure.

### Alphynx | *Development Agency Website — Next.js | [www.alphynx.in](http://www.alphynx.in)*

- Responsive corporate website with SEO optimization, performance improvements, and a production cloud deployment with proper environment configuration.

## EDUCATION & TRAINING

---

### Mohanlal Sukhadia University

*Bachelor of Commerce (B.Com), General*

2022 – 2025

Udaipur, Rajasthan

### Grras Solutions Pvt. Ltd

*AWS & Linux Training — AWS Core Services, Linux System Administration, Cloud Deployment*

Jun. 2023 – Sep. 2023

Ahmedabad, India

## SKILLS

---

**Backend** : Node.js, Express.js, PHP (Core, CakePHP), REST APIs, Supabase (BaaS), Redis

**Frontend** : Next.js, React, JavaScript (ES6+), HTML5, CSS3

**Database** : MySQL, SQL Query Optimization, Database Design, Drizzle ORM

**Cloud & DevOps**: AWS, Linux, Server Deployment & Management

**Tools** : VS Code, Strapi (CMS), Swagger, Postman, Git, GitHub, AI Tools
